## ABSTRACT

In addition to regular papers on the topics above, ACM SenSys this year solicits new directions papers discussing the future of sensor-enabled computer systems. New direction papers shall present a compelling vision of the field five years from now, discuss what current or foreseeable technologies hold the highest potential within this time frame, and argue on what are the key research problems the community needs to tackle right now to eventually realize this vision. New direction papers will be reviewed separately by the SenSys steering committee. Accepted papers will be part of the proceedings, alongside regular papers, and their authors will be invited to a panel session, together with leading experts, to share their vision. "New directions" papers are required to follow the same submission guidelines, but be limited to 6 pages everything included.<sup>1</sup>

## CCS CONCEPTS

•**Computer systems organization** → **Embedded systems**; *Redundancy*; Robotics; •**Networks** → Network reliability;
